

Wellsys Purification Process

4A — pH Balancing Stage

pH Filter: Corrects acidic water that is present in other bottled water and RO units.

4 parts of the pH filter:

- Coral Sand
- Zeolite
- Jade
- Colloidal Silver

The optimal pH balance for humans is 7.6 alkalinity. Proper pH balance is the first major line of defense against sickness and disease and for health and vitality.

Most degenerative diseases attributed to aging (cancer, osteoporosis, heart disease), and other maladies (fatigue, kidney stones, gallstones) have all been scientifically linked to mineral deficiencies that result in your bodily fluids, including your saliva, becoming more acidic.

Scientists have discovered that cancer thrives in an acidic environment, but cannot survive in an alkaline environment.

PART 1 – CORAL SAND

The Benefits of Maintaining a Balanced pH

In an important scientific breakthrough scientists discovered that the body fluids of healthy people are alkaline with a high pH. The bodily fluids of sick people are acidic with a low pH.

We live and die at the cellular level. In order to understand a basic knowledge of pH balance, it is necessary to realize that all of the cells of the human body, billions of them, are slightly alkaline and must maintain constant alkalinity if they are to produce the ATP that gives us energy and cellular function. Alkalinity builds up and acidity tears down.

By drinking 1-gallon of water a day with the recommended dose of coral calcium, your body will maintain a perfect pH level. Coral calcium cleanses the kidneys, intestines and liver while breaking down heavy metals and drug residues in the body. It also contains various antioxidants that wrap around the cells to act as a buffer against free radicals.

Wellsys pH Level

PART 2 – ZEOLITE

Immune Detox Stage

Zeolite is a mineral found in sea salt. It provides an immune-detox to help prevent illness and absorbs the toxins, free radicals, and inorganic metals from the body.

Studies have shown that Zeolite's honeycomb-like structure has a high affinity for trapping heavy metals (particularly lead, mercury, cadmium and arsenic, pesticides, herbicides, PCBs, and other potentially harmful metals and toxins). These toxins are strongly correlated with the occurrence of a wide range of diseases, including cancer and neurological disorders, such as Alzheimer's, autism and dementia.

The particles of Zeolite are so fine that they can actually pass in between the body's cells. Due to its extraordinary absorption and selection capabilities, Zeolite binds with waste products, toxins and heavy metals, allowing these substances to be easily eliminated from the body.

PART 3 – JADE

Enhances with minerals

Jade is high in calcium and magnesium and possesses healing qualities that strengthens the lungs, heart, thymus, immune and nervous systems, as well as increasing kidney filtration and blood detoxification. It also encourages cell metabolism which increases vitality, strengthens immune defense and enhances endurance. It is well known in the Orient for slowing down the process of aging as well as maximizing the body's ability to strengthen its healing abilities. In a study performed in Germany, it was reported that Jade lowers high blood pressure and improves circulation. Jade filtered water displayed a decrease in high blood pressure and high cholesterol levels.

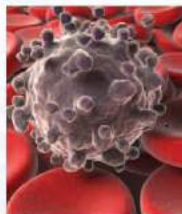

PART 4 – COLLOIDAL SILVER

Sanitization

Colloidal silver technology weds the well-known benefits of silver with new "smart-material" technology, resulting in a new tool that can be used for good hygiene and product quality. This technology responds to the environment by releasing silver only when the conditions are right for bacterial growth.

Silver changes the purified water to the sub-alkali water with the eruption of a small quantity of the mineral from the glossy semiconductor functional pH-Ceramic.

The activated silver-carbon in high purity, has the capacity of restraining the increase of germs and removes the delicate odor and bad taste in the water.

Water is the single most important element for sustaining human life.

In our modern world we are bombarded by stress every day, as well as a barrage of toxins — no matter how careful we may be in our lifestyle choices. By removing the toxic burden in our cells, our body has a greatly improved capacity to heal and balance itself.

Tubing, filters, reservoirs, and dispensing systems provide warm, wet environments with plenty of nutrients — ideal conditions for microbes. When common water bacteria samples are placed on a silver zeolite-treated water cooler part, the bacteria count is reduced by 99.999 percent versus an untreated part.
